SUMMARY

Site Reliability Engineer with 3+ years of AWS and Azure cloud infrastructure expertise, specializing in Terraform-driven deployments, CI/CD pipelines, and observability. Currently building AI-native SRE automation that reduced workflow costs and accelerated incident resolution through automated RCA and self-healing actions. Skilled at designing and optimizing scalable, reliable cloud platforms for production environments.

SKILLS

- **Cloud:** AWS, EC2, VPC, RDS, IAM, ALB/NLB, Azure, GCP
- **Containers & Orchestration:** Docker, Kubernetes, EKS, Terraform
- **Monitoring & Observability:** Datadog, Grafana, CloudWatch, Prometheus
- **SRE Practices:** RCA, SLO/SLI, Error Budgets, Incident Response, On-call
- **Automation & Scripting:** Python, Ubuntu, Linux, Windows, Redhat, Ansible
- **CI/CD:** Jenkins, GitHub Actions, GitLab CI
- **Networking:** DNS, HTTP, Load Balancing, Security Groups, VPC design, TLS
- **Security:** IAM, KMS, Secrets, least-privilege principles
- **Databases:** SQL, PostgreSQL, AWS RDS, Tableau

PROFESSIONAL EXPERIENCE

ADPS AI

AI Native SRE Intern

Nov 2025 - Present

California, United States

- Worked with the founder on building an AI-native SRE platform that integrates with AWS, GitHub, Kubernetes, Datadog, Jenkins, and Ansible to automate reliability workflows.
- Tested over 100+ operational scenarios across commit analysis, CI/CD debugging, incident detection, RCA, self-healing actions, and GitOps/infra automation.
- Identified system gaps in agent behavior, connector integrations, and multi-agent reasoning; proposed improvements that reduced LLM cost and improved overall reliability
- Contributed to early development of platform agents for observability, CI/CD, infra RCA, Git change intelligence, and cloud resource automation across AWS/GCP/Azure

Hitachi Vantara

Site Reliability Engineer - Senior Cloud Infrastructure

Aug 2021 - Aug 2024

India

- Designed, deployed, and managed AWS and Azure infrastructure using Terraform (VPCs, EC2, IAM, RDS, networking, autoscaling).
- Built and maintained CI/CD pipelines using Jenkins, Git, and GitHub Actions for automated provisioning, testing, and deployments.
- Implemented observability using Datadog, CloudWatch, Prometheus, and Grafana, creating dashboards, metrics, alerts, and log pipelines for production workloads.
- Participated in on-call rotations (P1-P4), led incident response as DRI, performed root cause analysis, and contributed to blameless postmortems.
- Automated operational tasks using Python to reduce manual work and improve deployment and monitoring workflows.
- Enhanced AWS security posture by improving IAM policies, key rotation, resource permissions, and encryption standards, and implemented Azure Active Directory for identity and access management.
- Partnered with development teams to support microservices deployments, improve system health, and ensure stable production releases.
- Created and updated runbooks, SOPs, and troubleshooting guides to streamline operations and accelerate incident recovery.

California State University, Northridge

Technical Support Assistant -TSENG College

May 2025

Los Angeles

- Troubleshoot system, network, and application issues in real time across classroom and online environments, developing strong diagnostic and incident-handling skills.
- Configured and validated platforms like Canvas LMS, Zoom, and Windows systems to ensure reliable operation during live sessions.

PROJECTS

Production Infrastructure Reliability & Automation -Terraform, Github, Jenkins

Aug 2021 - Aug 2024

- Designed and supported reliable AWS infrastructure for cloud enterprise environments, using Terraform modules for VPC, EC2, IAM, and networking.
- Strengthened reliability by tuning autoscaling behavior, refining health checks, and using Datadog, CloudWatch dashboards to detect performance degradation early.
- Automated operational checks and configuration validations with Python and integrated infrastructure tests into Jenkins pipelines to ensure safe and consistent deployments

EDUCATION

California State University, Northridge Los Angeles

Master of Science, Engineering Management (Specialization in Cloud and Data Analytics)

Aug 2024 - May 2026

Los Angeles

- **GPA:** 3.7

KL University India

Bachelor of Technology, Engineering

Jul 2017 - May 2021

CERTIFICATES

- AWS Solution Architect- Associate
- Microsoft Azure Fundamentals
